

Prototype to Product with Antigravity

Kenneth Kinyanjui

June 2026 #IOExtendedNairobi

@kenju254

About Kenju

- **Chief Product Technology Officer** : Exodus Mobility
- **3X Founder**: WeCashup, Platfot Inc , Exodus Mobility
- **Google Expert**: Google Cloud Platform , Google Pay
- **Operator**: 7 yr Software Engineering, 7 yr Product Management
- **Regions**: Africa, Europe , North America
- **Domains**: Mobility , Financial Services , Indirect Tax (VAT), Logistics , Marketplaces,
- **Fun Stuff** : Running, Cycling , Swimming, Wine , Gelato
- **Conversation Starter**: Tour de France

This Session is About

- Teaching you to fish rather than giving you the fish
- Catching a bit of fish
- Some tips I have learnt along the way

What We Will Go Through

- Product Sense for Developers
- Product & Engineering Combined
- Let's stitch it together with Antigravity

Product Sense for Developers

Let's go back in time

Product Sense for Developers

- **User:** Who is the user and their profile?
- **Problem Statement :** What is the user's pain point and what can't they achieve today?
- **User Delight:** What is the end-state that addresses the user pain-point
- **Delivery:** How will the user experience this product ?

Let's tabulate

- **User Profile** : An avid fan of football and is in GMT timezone. Has a favorite team(s). Is keeping an eye on other teams too.
- **Problem Statement** : User has to juggle between Google Search to see the world cup updates, go to youtube to see the highlight and go back to find where the team is in the standing. Some games are at 4am in the morning.
- **User Delight**: User can follow their favorite team , get updates daily on previous day with highlights embedded and a schedule of upcoming games. Finally a standing overview.
- **Delivery**: User can view this on any device they have that has web access.

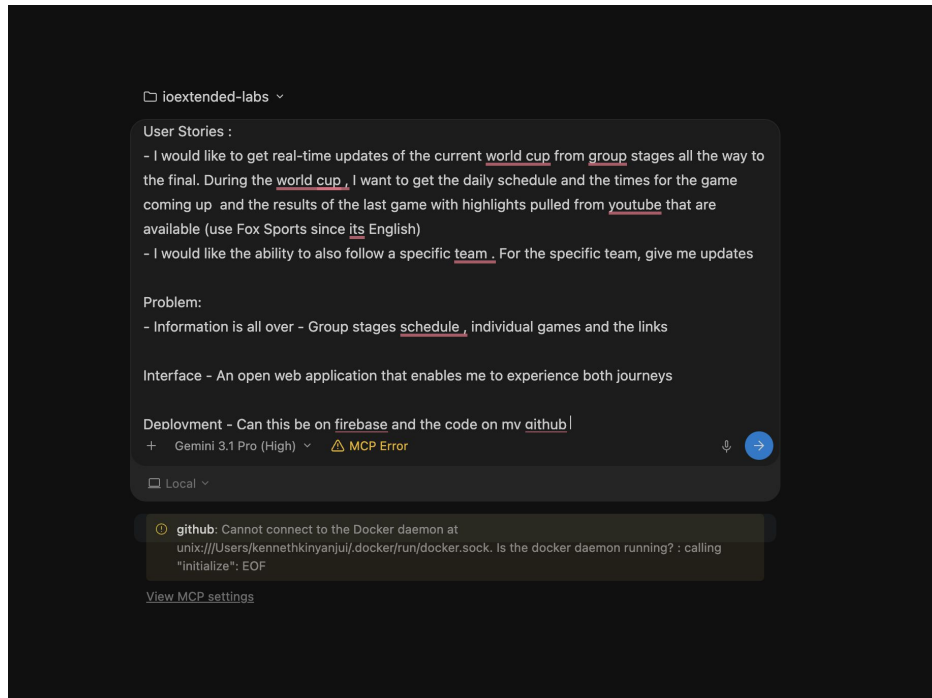

Product & Engineering Combined

Product + Engineering Combined

- **User:** Who is the user and their profile?
- **Problem Statement :** What is the user's pain point and what can't they achieve today?
- **User Delight:** What is the end-state that addresses the user pain-point
- **Delivery:** How will the user experience this product ?

Let's stitch it together with Antigravity

Let's stitch it together on Antigravity 2.0

Let's stitch it together on antigravity

- Define the foundation:
 - **Product:** Functional and Usable as we had outlined
 - **Infrastructure:** Live on production environment
 - **Best Practice :** Follow Product Sense Approach and document
 - **Agentic Approach:** Plan , Execute , Judge

Principles of a Good Product

- Usable : It works
- Maintainable : Others can contribute
- Reliable : Good architecture
- Secure: Security is paramount

Bonus : Sage Advice

Always remember

- **Models:** Use the appropriate model
 - Plan (Think)- Gemini Pro, Opus
 - Execute - Gemini Flash, Sonnet
 - Judge - Gemini Flash
- **MCPs:** Set up Github, Firebase, GCP
- **Engineering Best Practice:** TDD ,
- **Infrastructure:** Unutilized resources and an uncontrollable bill
- **Process:** Forgetting the outcomes and uncertainty.

Q&A

Session End
