Building intelligent AI agents using Google's ADK

What is an AI Agent?

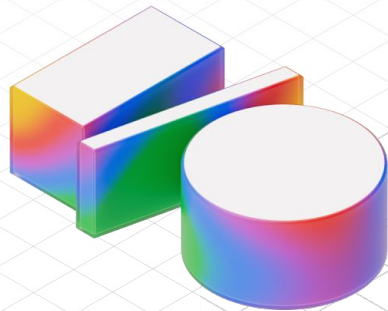

???

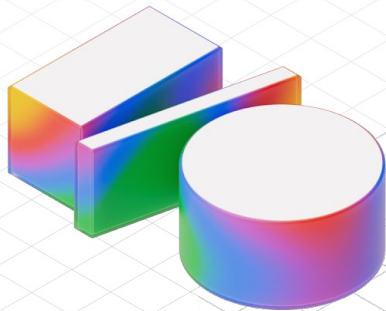

What is ADK?

<https://code-labs.developers.google.com/your-first-agent-with-adk#0>

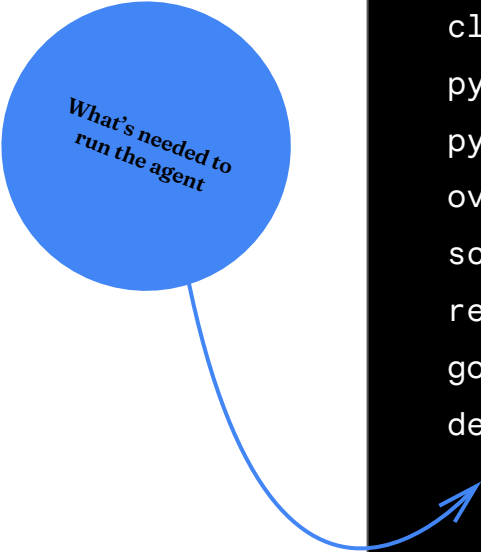

<https://github.com/Rowdy/adk-renovation-single-agent>

Requirements.txt

We will install them!

*What's needed to
run the agent*

```
google-adk==1.1.0  
pysqlite3-binary  
pdfplumber  
google-cloud-aiplatform  
cloudpickle==3.1.1  
pydantic==2.10.6  
pytest  
overrides  
scikit-learn  
reportlab  
google-cloud-storage  
deprecated
```

AGENT WORKFLOW

1. User enters renovation request
2. `proposal_agent` receives request
3. Gemini analyzes request
4. Gemini decides to call `store_pdf`
5. `store_pdf` creates PDF using ReportLab

6. PDF uploaded to Cloud Storage
7. Tool returns success message
8. Gemini generates final response
9. User receives proposal link/result

Major Commands

Project ID

```
gcloud config get-value project
```

Deployment

```
adk deploy cloud_run  
--project=<actual-project-id>  
--region=us-central1  
--service_name=renovation-agent  
--app_name=renovation-app  
--with_ui .
```
